## Battery Charger

Built for round the clock use

Designed around the demands of Battery Specialist, Manufacturer's, Retailer's, and Reclaimer's, the Series/Multi can be used on starting and deep cycle wet cell batteries. It is not recommended for nicad's, gels, AGM, or motorcycle batteries.

MODEL	DC VOLTS	DC AMPS	AC REQUIREMENTS	DIMENSIONS	WEIGHT
QPA6-127v/6A	6-127	6A	117VAC 60 hz. 6 amps	8 x 12 x 9	34
QPA12-127v/15A	12-127	15A	117VAC 60 hz. 18 amps	8 x 12 x 11	48

The QPA6-127v/6A is designed to charge any combination of 6, 12, or 24 volt batteries in series up to a total of 60 cells.

Current output is infinitely adjustable. A single smooth control is used for adjustment instead of "clickety" tap switches. The charge rate will taper as the batteries become charged.

The 6 amp model has an automatic range switching circuit, so it knows how many batteries it's connected to.

The Series/Multi is safe. A 100% copper wound isolated transformer is coupled to a polarity protected, current limited circuit. No power is present in the clamps until they are connected properly to the batteries which eliminates arcing and shock hazards. The 6 amp charge rate can not be exceeded.
